Statshield® Moisture Barrier Bags
Application Instructions

Figure 1. Desco Statshield® Moisture Barrier Bag

Description
Desco Statshield® Moisture Barrier Bags combine the properties of a MOISTURE BARRIER protection with EMI-RFI-ESD shielding. Statshield® Moisture Barrier Bags meet the electrical and physical requirements of ANSI/ESD S20.20, Packaging standard ANSI/ESD S541, and Static Control Bag ANSI/ESD S11.4. All Statshield® Moisture Barrier Bags are amide, amine, and silicone free and pass outgassing and corrosion tests. All bags are printed with ESD protective symbol and the Moisture-Sensitive Identification Label and are dated and lot coded for quality control traceability.

All three styles are available in a variety of standard sizes, custom sizes and with custom printing.

Desco offers three styles of Moisture Barrier Bags:

Moisture Barrier Bags
- Static Control Bag ANSI/ESD S11.4 Level 2
  - Thickness .0035" (.0889mm)
  - Moisture Barrier Transfer Rate (MVTR) ≤ 0.020
  - Puncture Resistance >20 lbs

High Moisture Barrier Bags
- Static Control Bag ANSI/ESD S11.4 Level 2
  - Thickness .0065" (.1651mm)
  - Moisture Barrier Transfer Rate (MVTR) ≤ 0.014
  - Puncture Resistance >30 lbs

Foil (EMI/RFI) Moisture Barrier Bag
- Static Control Bag ANSI/ESD S11.4 Level 1
  - Thickness .0040" (.1061mm)
  - Moisture Barrier Transfer Rate (MVTR) ≤ 0.0003
  - Puncture Resistance >27 lbs

Notes:
- Thickness - Typical value. Nominal ±10% per MIL-STD-3010 1003
- Moisture Barrier Transfer Rate (MVTR) - Measured per ASTM F1249 (≤ 0.014g/100sq. in./24 hours)
- Puncture Resistance – measured per MIL-STD-3010 2065

Construction
Desco’s Statshield® Moisture Barrier Bags manufactured from a static dissipative metalized laminated film. The metal layer of the Desco’s Statshield® Moisture Barrier Bags and Statshield® High Moisture Barrier Bags is created by vacuum deposited manufacturing technique. This manufacturing technique allows for a more flexible finished bag that is less likely to tear or rip during use. Finished bags with foil layer, such as Desco’s Statshield® Foil Moisture Barrier Bags provides a better moisture barrier and is a good choice when having to meet IPC/JEDEC J-STD-033 Standard.
Dry Packing Information
The Statshield® Moisture Barrier Bag, Desiccant Packs and Humidity Indicator Cards have been developed for use in “DRY PACKAGING” applications. In order for the MBB bag and its accessories to perform properly, Desco recommends the user follow procedures defined in IPC/JEDEC J-STD-033B.

DESICCANT
Desiccant is a drying agent used to lower the moisture content of air within a closed space, such as a sealed Moisture Barrier bag. Desiccant is packaged in fractional units in order to facilitate its usage with a variety of bag sizes. One full “unit” of packaged desiccant will absorb the following quantities of water at equilibrium with air at 77°F (25°C): 3.00 grams @ 20% rH and 6.00 grams @ 40% rH, when tested to MIL-D-3464.

Figure 4. Desiccant packs

In order to provide a complete moisture barrier packaging system, desiccant must be inserted into the bag, prior to having the bag vacuum sealed. The recommended amount of desiccant is dependent on the interior surface area of the bag to be used. Figure 5 is a reference table indicating recommended minimum amounts of desiccant that should be used with Moisture Barrier Bags.

<table>

</tr>
</tbody>
</table>

Desiccant packs sold by Desco meet the requirements of MIL-D-3464. For more detailed information, see Drawing 13850.

HUMIDITY INDICATOR CARDS
Humidity Indicator Cards contain chemically impregnated, humidity sensitive, indicating spots that will change color with moisture. The comparison bar is used to determine relative humidity of air. Select the indicating spot that most closely matches the color of the comparison bar. The measured relative humidity is the percentage indicated on the matching spot. The chemical reaction of the indicating spots is completely reversible; the spots will continue to change color as the moisture levels change.

COBALT-DICHLORIDE FREE
Humidity Indicator Cards
Cobalt-Dichloride Free Humidity Indicator (HI) Cards provide electronic and semiconductor manufacturers with a JEDEC complaint humidity indicator card that is free of Cobalt-Dichloride, a chemical regulated under European Chemical Bureau (ECB) REACH-directives.

Specifications

Moisture Barrier Bag .0035" (.0889mm)

Electrical Properties

Resistance of polyester layer
1 x 10^4 to < 1 x 10^11 ohms per ANSI/ESD STM11.11

Resistance of polyethylene layer
1 x 10^4 to < 1 x 10^11 ohms per ANSI/ESD STM11.11

EMI Shielding (dB between 1 and 10 GHz)
45dB

Energy Penetration <10nJ per ANSI/ESD S11.31

Physical Properties

Thickness (nominal)
0.0035" (.0889mm) per MIL-STD-3010 1003

MVTR (grams / 100 in^2 / 24 hrs, 100°F) ≤0.02 per ASTM F 1249

Puncture Strength (lb)
≥20 per FTMS 101-C, MIL-STD-2065

For more detailed information, see Drawing 13806.

Foil Moisture Barrier Bag .0040" (.1016mm)

Electrical Properties

Resistance of polyester outer layer
1 x 10^4 to < 1 x 10^11 ohms per ANSI/ESD STM11.11

Resistance of polyethylene inner layer
1 x 10^4 to < 1 x 10^11 ohms per ANSI/ESD STM11.11

EMI Shielding (dB between 1 and 10 GHz)
45dB

Energy Penetration <10nJ per ANSI/ESD S11.31

Physical Properties

Thickness (nominal)
0.0040" (.1016mm) per MIL-STD-3010 2065

MVTR (≤ 0.014g/100sq. in./24 hours) ≤0.0003 per ASTM F 1249

Puncture Strength (lb)
≥25 per FTMS 101-C, MIL-STD-3010 2065

For more detailed information, see Drawing 13950.

High Moisture Barrier Bag .0065" (.1651mm)

Electrical Properties

Resistance of polyester outer layer
1 x 10^4 to < 1 x 10^11 ohms per ANSI/ESD STM11.11

Resistance of polyethylene inner layer
1 x 10^4 to < 1 x 10^11 ohms per ANSI/ESD STM11.11

EMI Shielding
45dB

Energy Penetration <10nJ per ANSI/ESD S11.31

Physical Properties

Thickness (nominal)
0.0065" (.1651mm) per MIL-STD-3010 1003

MVTR (≤ 0.014g /100sq. in./24 hours) 0.005 per ASTM F 1249

Puncture Strength (lb)
30 per FTMS 101-C, MIL-STD-3010 2065

For more detailed information, see Drawing 13760.
